

Over, Under, Around, and Through: Using the CMMI Continuous and Staged Representations Together to Optimize Process Improvement

Chuck Myers
Software Engineering Institute

Sponsored by the U.S. Department of Defense

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Some Questions

How many of you

- feel mostly positive about the CMMI?
- feel mostly negative about the CMMI?
- aren't sure how you feel about the CMMI?
- think it's way too thick?
- think it's not nearly thick enough?
- are curious about all the different models?
(SW, SE/SW, SE/SW/IPPD, SE/SW/IPPD/SS)
- aren't sure why there are two representations?
(Continuous and Staged)

A Note on Perspective

Long-time fan/advocate of CMM-based SPI.

Primary knowledge and experience is in SPI implementation.

Primary work has been with SW-CMM (staged model).

Pre-CMMI exposure to a continuous model has been relatively limited.

Not involved in CMMI development.

Basic Information

Multiple models:

- SW
- SE-SW
- SE-SW-IPPD
- SE-SW-IPPD-SS

Two representations:

- Continuous
- Staged

SE	Systems Engineering
SW	Software Engineering
IPPD	Integrated Product and Process Development
SS	Supplier Sourcing

Representation Advantages-Staged

- Provides big picture view that helps establish long-term vision
- High level priorities easier to establish
- Helps with planning and sequencing larger bodies of work
- Identifies relationships and dependencies relatively easily
- Clearly identifies major accomplishments

Representation Advantages-Continuous

- Provides greater flexibility in sequencing and priorities
- Establishes life cycle view of process area improvement
- Makes early progress and accomplishment more evident
- Lends visibility to conducting more detailed aspects of work
- Provides multiple ways for measuring and representing success

Representation Disadvantages-Staged

- Great temptation to use maturity levels as goals
- Lacks clearly visible granularity
- Large bodies of work (MLs) require substantial time to complete
- Difficult to show [early] progress and accomplishment
- Perception of failure if maturity level isn't reached

Representation Disadvantages-Continuous

- Relationships and dependencies more difficult to identify
- More difficult to establish priorities
- Breadth of work can be overwhelming and confusing
- Major accomplishments not clear

Premises of this Presentation

The availability of two representations is one of the most powerful and useful features of the CMMI.

The continuous and staged representations, used together, provide much more than either representation does by itself.

Those who use both representations to guide their work are likely to be more successful than those who use only one.

Staged Supported by Continuous

In summary, the continuous representation provides additional de facto granularity in support of a staged-focus initiative:

- as a guide for detailed “tactical” planning
- to demonstrate intermediate progress short of “PA” or “ML”
- for allaying concerns and building support among key stakeholders

Continuous Supported by Staged

In summary, the staged representation can provide structure for a continuous-focus initiative:

- as a guide for big picture “strategic” planning
- to “chunk” higher-granularity activities for senior management
- as a means for representing high-level success in “industry standard” terms key stakeholders will more readily understand

The Point of All This

Two representations provide orthogonal views of the CMMI process areas.

Multiple perspectives facilitate understanding of process improvement and increase flexibility.

Using continuous and staged together

- takes advantage of the benefits of both representations
- minimizes the negative effects of their disadvantages

Using both representations increases the potential effectiveness and efficiency of process improvement initiatives.

That's all, folks!

Your questions and observations, please...
